Research Interests

Reliable machine learning, foundation model reliability, and related applications, specifically I work on:

- Out-of-distribution (OOD) research: designing adaptive and interpretable learning algorithms that help ML models detect and generalize on OOD samples, such as semantic/covariate shifts, adversarial and noisy samples.
- Reliability of foundation models: understanding the blindspots of LLMs and VLMs for improved safeguarding efforts, such as model hallucination and harmful prompt detection.
- Applications: Graph embedding, object detection and segmentation.
- Interdisciplinary research: Biometrics, AI-aided cryo-microscopy/protein structural analysis.
