Hybrid Supervised Panoptic Segmentation
- Propose a new Hybrid Supervised Panoptic Segmentation (HSPS) framework to significantly reduce the annotation cost for the most complex panoptic segmentation task. HSPS fully utilizes

various kinds of weak supervision in the dataset, i.e., image labels, boxes and also semantic coherence between the *thing* and *stuff* branch, which achieves a 41.7% *Panoptic Quality* via 30% fully annotated data.
- Submit one paper to AAAI and get accepted.

Department of Machine Learning, Carnegie Mellon University   Pittsburgh, PA, USA
Student Intern, Supervised by Haohan Wang and Professor, Eric. Xing   April 2019 – Nov. 2019
Robust Machine Learning on Adversarial Attacks
- Propose two simple and effective intuitions to improve adversarial training. Apply One-Vs-All (OVA) models to improve adversarial training, which naturally allows the perturbation bound to be different for different classes.
- Propose a conditional adversarial training method that gradually improves the perturbation bound until no perturbed adversarial examples are considered valid.

Department of Computational Biology, Carnegie Mellon University   Pittsburgh, PA, USA
Student Intern, Supervised by Assistant Research Professor, Min Xu   July 2018 – Feb. 2020
Deep Learning for Cellular Electron Cryo-Tomography (CECT)
- Work on domain-specific problems in CECT, such as open-set novel macromolecule detection and recognition and label-efficient sub-tomogram classification.
- Submit four papers and get accepted.
